

MobiRoof ECO®

Product description

MobiRoof ECO is a ready-made green roof system that consists of a plant cassette filled with substrate and 6 - 8 different types of Sedum. The cassettes are easily placed against each other, creating a green roof immediately. MobiRoof ECO is an extensive green roof system suitable for flat roofs and roofs with a slope angle of up to 10 degrees (20%) and always remains movable.

MobiRoof ECO is a circular green roof system. The cassette is made of recycled material and fully recyclable. The cassettes are pre-grown locally with cuttings from our own nursery.

Water retention

The water capacity is approximately 20 litres per m². The water buffer capacity can be increased by adding a buffer layer under the cassette. As a result, the MobiRoof ECO green roof system is eligible for subsidies and tax advantages.

Dimensions

The external measurements of the cassettes are 50 x 50 x 6 cm (=0.25 m²). 4 cassettes therefore fit into 1 m².

Weight

MobiRoof weighs approximately 38 kg per m² when dry and approximately 58 kg per m² when completely saturated with water.
